

EMRL CASE STUDY: ONDO GOLD EXPLORATION

Project Overview: Comprehensive Gold Resource Evaluation

Location: Ondo State, Nigeria

Status: Ongoing Phase III Exploration

EXECUTIVE SUMMARY

Eminent Mines Resources Limited (EMRL) has successfully delineated a high-potential gold-bearing corridor in Ondo State through a multi-disciplinary exploration program. The project demonstrates our capacity for scientific rigor and regulatory excellence.

TECHNICAL METHODOLOGY

Our team utilized advanced geochemical stream sediment sampling across 500 sq km, followed by targeted RC drilling to test anomalous zones. Initial results indicate vein-hosted mineralization with grades averaging 4.5 g/t Au in primary targets.

COMMUNITY IMPACT

Throughout the exploration phase, EMRL has maintained 100% local employment for non-technical roles and has implemented water purification projects for three host villages, ensuring that exploration progress mirrors community growth.

GOVERNMENT COMPLIANCE

The project operates in strict accordance with the Ministry of Mines and Steel Development (MMSD) guidelines. All environmental impact assessments are current and transparently shared with federal regulatory bodies.
